

A00286-3Y

- ❖ Parentage: Yukon Gem x A89655-5DY
- ❖ Yellow skin with pink splash around eyes and medium yellow flesh
- ❖ Average tuber size of 5.0 oz
- ❖ Highest yielding among all yellow entries in 2009 & 2010 Western Regional Red/Specialty Trials
- ❖ Good in both western and eastern (PA) environments
- ❖ Late Blight resistant
- ❖ Culinary qualities like Yukon Gold

Yellow with pink splash around shallow eyes and medium yellow flesh, and the highest total yield among yellow-fleshed entries. It has an attractive round shape to oblong shape and medium size (5.1 oz) with an average of 27% in the <4 oz and 25% in the 4-6 oz categories. The average specific gravity is 1.079 and it is low in internal and external defects. The fry color is light and uniform and has a good flavor when microwaving or boiling but bland when baked.
