

## A05180-3PY

- ❖ Parentage: ATND9331-2 x VC1075-1R
- ❖ Bright purple skin with light yellow flesh
- ❖ High yielding
- ❖ Average tuber size of 3.9 oz
- ❖ High merit ratings in 2014 & 2015 Western Regional Red/Specialty Trials

Purple skinned, bright yellow fleshed round tubers with moderate eye depth. The plants have excellent emergence and the tubers have good skin set although they are susceptible to shatter bruise. The yields were high compared to Yukon Gold with a high percentage of No 1s. Average tuber number was higher than Yukon Gold and the specific gravity was 1.060. It produces light and uniform colored French fries. The best flavor and texture was obtained by boiling.
